NOTE: A number of royalty reports submitted for areas in the offshore Gulf of Mexico in December and January did not clear Minerals Management Service automated systems until February. This resulted in an understatement of sales volume in January and an overstatement in February in this report series. Oil sales volume in January and February for the Gulf of Mexico is estimated at 45.1 million barrels. Offshore California reports were accurately reported. Total offshore sales volume in January, including the Gulf of Mexico and California, is estimated at 48.1 million barrels. Total offshore sales volume in February, including the Gulf of Mexico and California, is estimated at 48.4 million barrels. Royalty collections represent the amounts actually received and disbursed during this period of time. The distortions created by reporting problems in January and February will be resolved over an extended period of time. Annual report totals will reflect accurate figures.

NOTE: March 31, 2001, ended on a Saturday. March payments were not due until Monday, April 2. Although many payors submitted their reports in March, some may have deferred until April 2. March sales volumes and collections may be lower than would normally be expected and April sales volumes and collections may be higher than normal. This is difficult to measure during a period of significant price volatility. A review of the March and April reports suggests little, if any, effect on March and April reporting. Any month-to-month distortion of this type will be resolved over an extended period of time. Annual report totals will reflect accurate information. Please see [*Important Notice](#).

NOTE: A number of royalty reports submitted for areas in the offshore Gulf of Mexico during the period April-June did not clear Minerals Management Service automated systems until July. This resulted in an understatement of sales volume in April-June and an overstatement in July in this report series. Total offshore sales volume, including the Gulf of Mexico and California, during the period April-July is estimated at 48-50 million barrels per month. Royalty collections represent the amounts actually received and disbursed during this period of time. The distortions created by reporting problems in April-July will be resolved over an extended period of time. Annual report totals will reflect accurate figures.

June 30, 2001, ended on a Saturday. June payments were not due until Monday, July 2. Although many payors submitted their reports in June, some may have deferred until July 2. June sales volumes and collections may be lower than would normally be expected and July sales volumes and collections may be higher than normal. This is difficult to measure during a period of significant price volatility. A review of the June and July reports suggests little, if any effect on June and July reporting due to this phenomenon. Any month-to-month distortion of this type will be resolved over an extended period of time. Annual report totals will reflect accurate figures. Please see [*Important Notice](#).

NOTE: A number of royalty reports submitted for areas in the offshore Gulf of Mexico during August did not clear Minerals Management Service automated systems during the month. In addition, a series of refunds were issued for offshore California oil properties. This resulted in an understatement of sales volume in August in this report series.

Many of the offshore reports that did not clear the system in August were accepted in September. This created an overstatement of sales volume during September. Total offshore sales volume, including the Gulf of Mexico and California, is estimated at 48-50 million barrels each month. Royalty collections represent the amounts actually received and disbursed during this period of time. The distortions created by reporting problems in August and September will be resolved over an extended period of time. Annual report totals will reflect accurate figures.
